

WXDashboard User Guide

WXDashboard turns WeChat work group chats into a structured, searchable, filterable ledger. This guide walks through the core features using three screenshots.

1. Main Dashboard (Overview)

After opening `http://127.0.0.1:8888` , the interface is divided into three sections top to bottom:

Top Toolbar

- **Project Switcher** — The dropdown next to the title switches between projects. Each project manages its own groups and data independently.
- **Search** — Full-text search across group names, senders, and message content. Results appear in a slide-out panel on the right.
- **Export Excel** — Downloads the current filtered view as `.xlsx` . Columns match the page exactly. Filename format: `WXGLedger_Project_Category_Date.xlsx` .

- **Refresh** — Incrementally pulls the latest WeChat messages. Sync progress is shown in a modal dialog.

Category Tabs

Groups are organized into two top-level categories based on project structure:

Top-Level	Subcategories
Internal (General Contractor)	Internal Comms, Construction Bureau, Design Institute
External (Subcontractors)	Supplier Inquiry, Foundation, Building MEP, Insurance, Logistics

Click a tab to filter groups by category. The "All" tab shows every group.

Data Table

The table displays key information for each group:

Column	Description
#	Row number
Group Name	WeChat group name — click to open the detail drawer
Category	Category and subcategory
Last Active	Date of the most recent message. Color indicates recency (green ≤3 days, amber 3-7 days, red >7 days)
Messages	Total synced message count
Owner	Group creator
Recent Messages	Preview of the 3 most recent messages (time, sender, content excerpt)
Contacts	Emails and phone numbers automatically extracted from messages

2. Project Switching & Category Filtering

Switching Projects

Select a different project from the title dropdown. The page refreshes automatically:

- Category tabs update to match the project
- Only groups belonging to the selected project are shown
- Search scope is limited to the current project

Filtering by Category

After clicking a category tab:

- The table shows only groups in that category
- Excel export includes only the currently filtered data
- The active tab is highlighted

3. Group Detail Drawer

Click any group name in the table to open a slide-out drawer from the right, with four tabs:

Messages

- Paginated view of all messages in the group, newest first (50 per page)
- Each message shows timestamp, sender, and content
- Navigate through history with pagination controls
- Image and file messages appear as clickable links that open in WeChat

Summary

- AI-generated summaries of group conversations
- Listed newest first, each with a date range and summary text
- Only generated for groups with more than 50 messages

Extractions

Structured information automatically extracted by AI, organized by type:

- Contact info (company, title, phone/email)
- Technical parameters (specifications, standards, values)
- Schedule milestones (planned dates, key events)

- Document/drawing references (numbers, versions, issue dates)

Settings

Manually manage group classification:

- **Project** — Change which project the group belongs to
- **Category** — Select top-level category (Internal / External)
- **Subcategory** — Pick a specific subcategory
- **Save** — Locks the classification so the AI will not override it
- **Unlock** — Restores AI auto-management of the group's classification

Typical Workflow

Launch app → Select project → Refresh messages (incremental sync)

↓

Browse category tabs → Click a group name to see details

↓

Search keywords → Locate specific messages

↓

Export Excel → Generate ledger report
